App Service Plan

Create

Overview Plans Usage Information + Support Reviews

App Service plans give you the flexibility to allocate specific apps to a given set of resources and further optimize your Azure resource utilization. This way, if you want to save money on your testing environment you can share a plan across multiple apps.

## Create App Service Plan

**App Service Plan details**

Name \* webapidev01 ✓

Operating System \* ☐ Linux ☒ Windows

Region \* Brazil South ✓

**Pricing Tier**

App Service plan pricing tier determines the location, features, cost and compute resources associated with your app. [Learn more](#)

Sku and size \* **Free F1**  
Shared infrastructure, 1 GB memory

**Zone redundancy**

An App Service plan can be deployed as a zone redundant service in the regions that support it. This is a deployment time only decision. You can't make an App Service plan zone redundant after it has been deployed. [Learn more](#)

Zone redundancy ☐ Enabled: Your App Service plan and the apps in it will be zone redundant. The minimum App Service plan instance count will be three.

## Create App Service Plan

Basics **Tags** Review + create

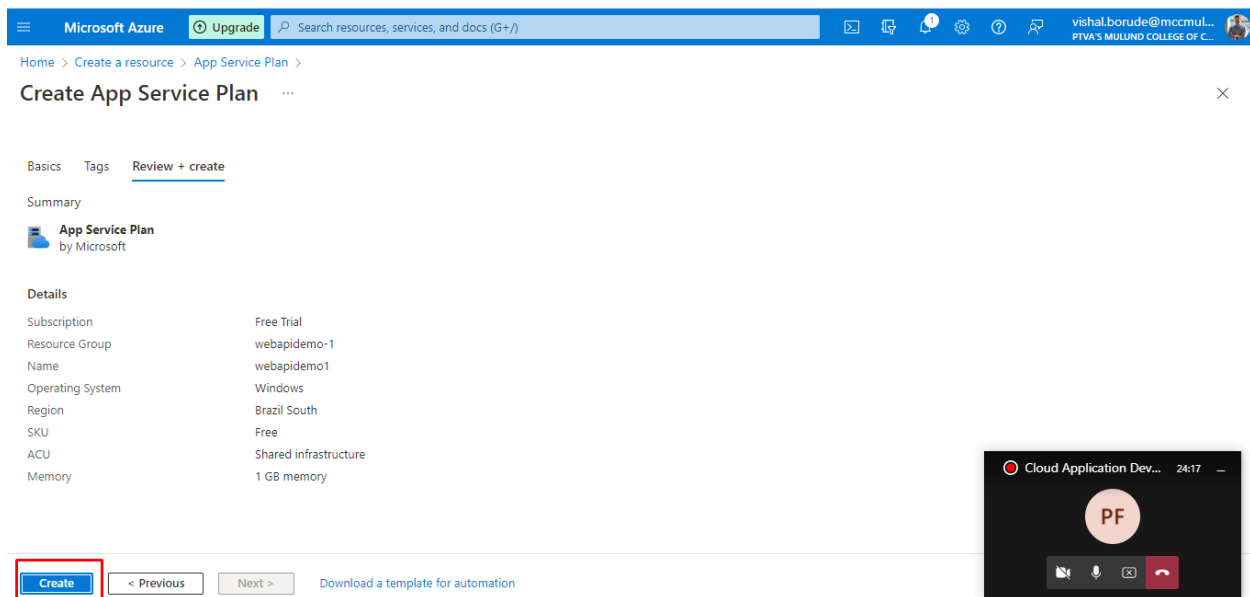

Tags are name/value pairs that enable you to categorize resources and view consolidated billing by applying the same tag to multiple resources and resource groups.

Note that if you create tags and then change resource settings on other tabs, your tags will be automatically updated.

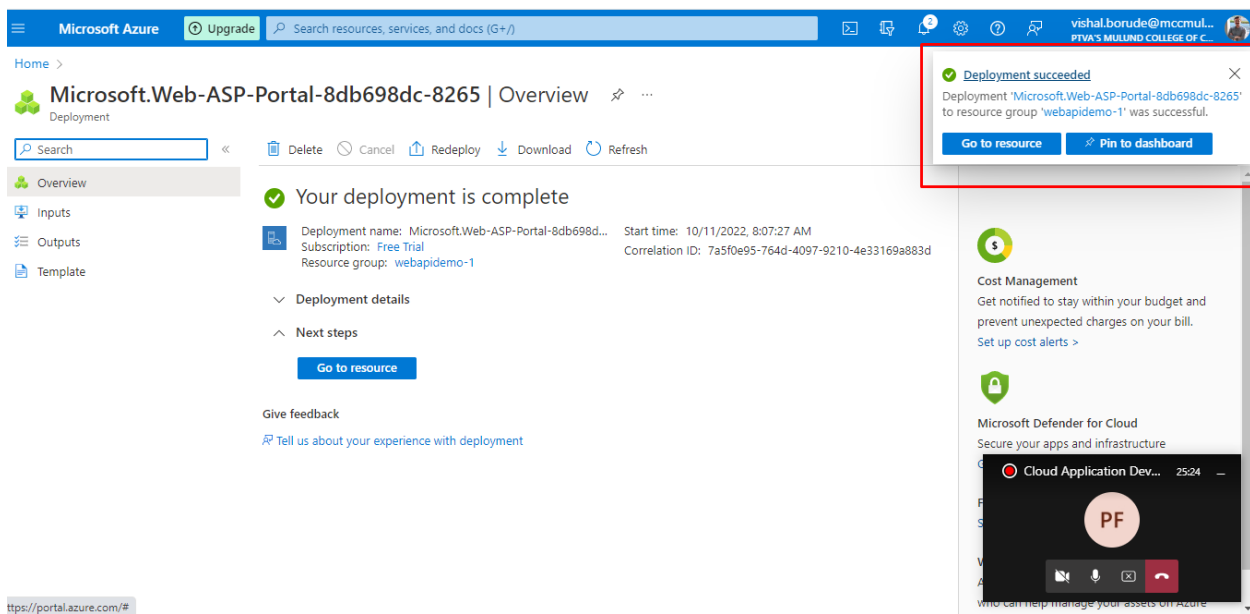

Name	Value	Resource
	:	App Service Plan
